

JS Simple Framework The LifeCycle

App.js

Register Routes

Register Modules

Create the link page - modules. At this moment, both still not available.

Create Pages - set the screens in the main container (index)

Init

GetRoute() - Get the current route.

Page.Up() - Make the current page available.

Page.InitModules() - Make the modules page available.

Modules.init() - Each module gets his method "init" called
